

Information Brief

Tailored User Benefit Powered by AppGuard

Confidence for Your Partners/Members

The Powers of AppGuard

What does a major national web portal and on-line service provider offer its members to instill confidence in their network security? For one such organization, it was a customized benefit that is powered by AppGuard. Blue Ridge Networks designed the ideal endpoint security solution that worked directly with the company's protocols and seamlessly integrated into their enterprise security system. With their own signature brand and benefit name, this company demonstrated their commitment to the protection of critical assets for their members.

Unprotected endpoints invite breaches that often result in unrecoverable costs.

AppGuard Solo Solution Example

AppGuard is an expert approach to prevent breaches from fileless malware, botnets, polymorphic malware, weaponized documents, targeted attacks, in-memory attacks, ransomware, phishing, watering-holes, drive-by-downloads, and other undetectable advanced threats. Without relying on detection, identification, signatures, or scanning, AppGuard automatically and dynamically disrupts malware attacks, halting breach attempts before a compromise can occur. The product is compatible with all Windows operating systems from XP through Windows 11, as well as standard and custom applications and typical system maintenance tools.

The installed product is very lightweight agent on each device. It runs on any standard hardware with a runtime memory footprint under 1 MB. Anti-virus and white listing solutions have proven to be ineffective against ransomware and financial crimes malware among others. AppGuard is the only consumer-oriented security solution that is cost effective and simple to use that stops these attacks. It provides protection to the underserved personal user who is now under attack.

Blue Ridge created and customized a new product fulfillment infrastructure to work with a leading web portal and on-line service provider's protocol, designed to track product orders and product deliveries, and handle orders numbering far beyond the company's projected demands. The tailored solutions easily handled surges in product requests. Volume orders have not been a problem. Product licenses are bundled with the install package prior to user download to make the customer's install experience as smooth as possible. The solution is installed with the default protections that are sufficient for most users. In this example, the first 40,000 users logged only *one* support call.
